

The former Harland & Wolff headquarters has been turned into a light, bright hotel that does full justice to this architectural and historic gem.

The 120 bedroom Titanic hotel is fitted out to take full advantage of its historic qualities and is complimented by contemporary additions of a new modern 5 storey bedroom wing to the north and three glass infill pavilions between the existing buildings at ground floor level.

APA Facade Systems worked with Frames Direct on this historical development. They expertly installed our TB50 Façade System the new modern wing of this Hotel.
