

The IDA Advanced Technology Building in Limerick was developed by JJ Rhatigan and consists of offices and light industrial/ production spaces and is located within the 'Enterprise & Employment' zoned lands in IDA's Raheen Business Park.

Our structurally glazed TB50 façade system with integrated concealed frame vents was installed on the building envelope of this LEED Silver office building by Season Master Double Glazing Ltd.

The double height entrance and light filled reception area, designed by Fewer Harrington & Partners, mirrors the design on our previous IDA projects in Galway, and the recently completed building in Dundalk.

The excellent images of the IDA Advanced Technology Building in Limerick are courtesy of Michael Conlon Photography.
