Pressed Metal Products

Pressed Aluminium Flashings and Panels

In our modern premises in west Dublin, APA Systems have invested in the latest technology to produce aluminium flashings and panels. Our CNC controlled break press and guillotine can provide our customers with low cost solutions for all their pressed metal requirements. We have two in-house paint lines which have achieved the Qualicoat and Interpon D standards for polyester powder coating finishes.

We will be offering our customers the time saving and economical benefits of a one stop shop facility. We will do this by sourcing the products, pressing, welding, jointing plates and painting the products. We will also stock the aluminium in a variety of sheet sizes and thicknesses allowing us to optimise the panels and keep costs low.
