ST 80

ST WINDOWS - 70/70 HI/80

Our high-performance ST window suite incorporates a variety of types and styles incl. tilt & turn, casement, bead in open out, hopper, parallel. All our systems have multi-point locking facilities for added security and the same sight lines and dimensions. The versatility of the locking mechanism used in the ST window system permits the incorporation of extra-large sashes into the fenestration or facade.

Thermally efficient polyamide cores (24-44mm), allows the value engineering of the window system to suit thermal requirements of projects with ease, and without interfering with sight lines. Depending on the chosen system, the glazing aperture can vary from 28mm - 52mm, allowing a choice of infill panels to suit thermal and acoustic performance requirements.

INTEGRATABLE WITH OUR LIFE ENHANCING WINDOW

APA Facade Systems have designed the Life Enhancing window to meet the needs of people with limited mobility. This turn and tilt system is compatible with our ST window suite. It is easy for the user to operate because of the convenient location of the handle at the bottom of the window.

- Easy to operate for trickle or purge ventilation.
- Compatible with all of our ST window systems.
- Fully tested to BS EN standards.
- Suggested maximum size of 900mm x 1500mm.

European Test Standards	Result
Air Permeability	600pa
Water Tightness	1050pa
Static	2000pa
