Curtain Wall

Design

Our TB50 /60 curtain wall systems are the ideal solutions to enclose any elevation of the building envelope. Combining structural strength with aesthetic appearance the thermally broken, drained and ventilated TB50/60 systems provide an aesthetically pleasing external finish, without compromising on the high-performances required by architects and specifiers.

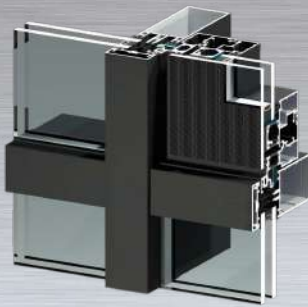

One of the many features of the TB50/60 is the multiple choice of the mullions and transoms. This allows the designers to achieve large spans whilst maintaining a 50mm/60mm sight line.

Properties

- Standard mullion depths available from 90mm – 275mm
- Glazing thickness variance of up to 52mm
- 50mm / 60 mm external sight line
- Excellent thermal and acoustic performance
- Variation in aesthetic external cap options available
- Integrated solar shading systems available
- 30-minute non-structural fire-rated system available
- Evaluated and tested to the highest BS EN standards.

Easily Integrated Concealed Frame Vents, Louvres & Solar Shading

- Fully integrated ventilation solutions available (including Parallel Sashes)
- Variation in aesthetic external cap options available to either plane
- Integrated solar shading and louvre systems available
- 30 minute non-structural fire rated system available

Sustainable Curtain Wall Systems

Most of the components and materials used in our curtain wall systems have been designed and selected for their end of life recycling capabilities and their durability.

This can help you to achieve the required BREEAM and LEED standards.

Our curtain wall systems are the perfect choice for the most demanding and desirable commercial, institutional and residential developments.
