

The North West IDA Advanced Technology Building is an impressive three-story, 4,500 sq. m (48,437 sq. ft) office building in Sligo, designed to LEED-CS standard by Fewer Harrington & Partners.

Season Master Double Glazing Ltd installed our TB50 SG curtain wall system on the full-height entrance, increasing natural light, creating a bright vibrant reception area.

All office spaces provide natural ventilation and beautiful views of the existing parklands thanks to the large areas of curtain walls with integrated concealed frame vents.

Season Master also installed our bespoke brise soleil panels to control the level of sunlight entering the building. Installing brise soleil on the external facade of the building will help control solar heat gain, reducing the need for air-conditioning and therefore the overall operating costs of the building.
