

ESB Networks offices in South Dublin were completely transformed with a full refurbishment in 2021.

The upgraded office of the state-owned electricity company was one of the first buildings to install our passive house standard ST90 window system.

The ST90 was specifically designed to meet the ever-increasing thermal efficiencies required by architects, design teams and their clients, with U_w values as low as $0.48 \text{ W/m}^2\text{K}$.

Over 100 of our side-hung casement windows were installed alongside our rebated doors by Winco Glazing Ltd.
